REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to teach and/or suggest a photoelectrode having an additional TCO layer between the semiconducting layer and either a doped tin oxide layer or a metal oxide layer that is more stable in basic solutions than that of the TCO layer, wherein the tin oxide layer or the metal oxide layer that is more stable in basic solutions than that of the TCO layer is arranged to be in electrically conductive contact with the TCO layer. The prior art of record further fails to teach and/or suggest a photoelectrode having a semiconductor layer in contact with an electrically conductive substrate on one side and in contact with a transparent electrically conductive doped tin oxide on the other side, wherein the semiconductor layer is a photovoltaic amorphous silicon n-i-p material, wherein the doped tin oxide layer is in contact with the "p" of the "n-i-p" semiconductor layer. The photoelectrochemical device having a photoelectrode as set forth above is also not taught and/or suggested.

The photoelectrode made in the manner above allows its use in electrolytic devices where due to the additional TCO layer, the photoelectrode is less susceptible to corrosion caused by contact with the electrolyte.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
